HUESEE

We have one goal in mind: to **SIMPLIFY YOUR LIFE** with practical coloring products adapted to your daily salon needs.

Conceived in Canada, developed in Italy, our products are the result of **CANADIAN INGENUITY** and **ITALIAN EXPERTISE**.

Canadian hairstylists and Italian chemists worked together to create easy-to-use coloring products that provide consistent, successful results every time.

COLOR CREAM

Brilliantly Designed Color

It is as simple as 1, 2, 3.

1

VERSATILE

Our permanent shades transform into demi-permanent shades by simply adjusting the color/developer ratio, developer volume and processing time. Easily manage your inventory with fewer products to keep in stock.

2

COVERING

100% gray hair coverage is easy to achieve with any permanent shade, regardless of the percentage of gray hairs. Forget about trying to find the perfect formula to cover grays—using a single shade will suffice.

3

PERFECTING

Getting an even color is easy with our permanent and demi-permanent shades that even out irregularities in the base color within one or two levels. HueSee offers a perfect color result, every time.

Color Cream

Experience HueSee's **VERSATILE**, **COVERING** and **PERFECTING** color. Ideal for demi-permanent or permanent use, it guarantees easy application, vibrant, fade-resistant color, and 100% gray coverage.

VERSATILE COLOR
Use as Permanent or Demi-Permanent

COVERING COLOR
Offers 100% Gray Hair Coverage with any Permanent Shade

PERFECTING COLOR
Evens out Irregularities in the Base Color

Shiny, Vibrant, Fade-Resistant Color

Hydrates Hair Strengthens Hair

Offers Maximum Scalp Comfort

Easy to Apply

Economic Color/Developer Ratio (1:1½ to 1:2)

Large Tubes (100 ml / 3.38 fl oz)

Pigments

Advanced Micropigments*

Thanks to their tiny size, our advanced micropigments easily and thoroughly penetrate the hair cuticle. The result is an **extremely rich and precise color**. Our advanced micropigments migrate more deeply into the cortex, where they are trapped for **better color retention**.

99.9%+ Pure Pigments*

With a purity surpassing 99.9%, our pigments provide **vibrant, luminous and long-lasting color**.

100% Reactive Pigments

Our hair color was developed according to the principles of stoichiometry for a perfectly balanced reaction, in which all our oxidizing pigments, reacting to the oxygen in the developer, react 100% and in a controlled manner. The result is a final **color that's more precise, stable and long-lasting**. There are no leftover excess pigments (which could interact with each other randomly to create harmful or irritating molecules, interact with other substances in the hair and alter the final color, or not react at all and irritate the scalp). By applying a stoichiometric balance, **our color produces predictable and consistent results, working at full strength while being gentle on the hair and scalp**.

» *Advanced micropigments and 99.9%+ pure pigments are found in our permanent, demi-permanent, super lightener and booster shades.

Key Ingredients

COCONUT FATTY ACIDS*
To Maintain the Hair's Strength

SYNTHETIC BEESWAX
To Trap the Hair's Moisture for Longer Lasting Color

POLYQUATERNIUM-22
To Makes the Hair Silky and Provides Body and Shine

CETEARYL ALCOHOL
To Help in Color Application for Even Saturation and Perfect Coloring

HYDROLYZED PEA PROTEIN

POMEGRANATE EXTRACT

AVOCADO EXTRACT

APRICOT EXTRACT

These four ingredients work in synergy to **HYDRATE**, **PROTECT**, and **SOOTHE** the scalp, providing maximum comfort throughout and after the coloring process.**

» *Coconut fatty acids are found in cocamidopropyl betaine.
» **Hydrolyzed pea protein and fruit extracts are found in our permanent, demi-permanent, super lightener and booster shades.

Designed for Creativity

Have fun with our palette of shades that can be used **INDIVIDUALLY** or **COMBINED** to create infinite possibilities.

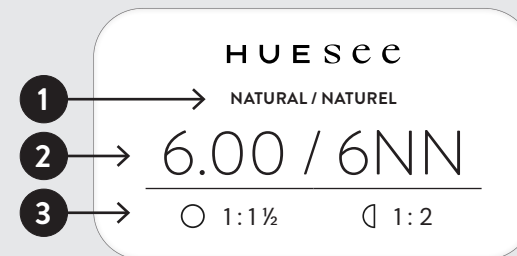

+ MANY MORE!

Designed to be Simple

We design **EASY-TO-USE** and **SMART PRODUCTS** always keeping the hairstylist in mind. We also create simple-to-use tools to help you at every step of the coloring process.

COLOR WHEEL	18 - 19
UNDERLYING PIGMENT	20
NEUTRALIZING GUIDE	21

Color Wheel

The color wheel is **YOUR BEST FRIEND** for mastering hair color.

By understanding the colors' positioning on the wheel and how they interact with one another, you can color confidently and create incredible hair colors.

Primary Colors

Primary colors are the basis for the color wheel and all other colors. Located in each third of the wheel, they are **blue, yellow, and red**.

Note: The blend of the three primary colors creates a neutral color (gray).

Secondary Colors

Secondary colors are created by mixing two primary colors in equal proportions. On the color wheel, they are located between the two primary colors they are composed of: **green** (blue + yellow), **orange** (yellow + red), and **violet** (blue + red).

Cool & Warm Colors

On the color wheel illustrated here, cool colors are located on the left side and warm colors on the right. The cool colors are **green, blue and violet**. The warm colors are **yellow, orange and red**.

Opposite Colors

When two opposite colors on the color wheel are mixed, the result is always a blend of the three primary colors that creates a neutral color (gray). We therefore say that opposite colors neutralize each other.

Example: If **violet** and **yellow** are mixed, the result is a blend of the three primary colors:

Violet (blue + red) and yellow = gray

It is interesting to note that opposite colors are always made up of a cool color and a warm color.

Example: **Violet** is a cool color and **yellow** is a warm color.

Adjacent Colors

When two adjacent colors on the color wheel are mixed, they enhance each other.

Example: If **yellow** and **orange** are mixed:

- » **Yellow** becomes more **orange**.
- » **Orange** becomes more **yellow**.

Color Wheel Applied to Hair Color

Primary and secondary colors make up the main hair tones:

Color	Hair Tone	Color	Hair Tone
Green	= Matte	Yellow	= Gold
Blue	= Ash	Orange	= Copper
Violet	= Violet	Red	= Red

Although the tones don't have the same name as the color they are associated with, they interact with each other in the same way as the colors:

- » Opposite tones neutralize each other
- » Adjacent tones enhance each other

Underlying Pigment

The underlying pigment must always be taken into consideration when formulating a permanent color.

What is the Underlying Pigment?

The underlying pigment is a pigment that appears during the lightening process.

The simplest way to identify the underlying pigment is to look at the hair color after lightening. For example, at Level 10, the hair is light yellow. Therefore, light yellow is the underlying pigment of Level 10.

When applying a permanent color that lightens and colors in a single step, the underlying pigment of the final level is not exposed visually, but it will still interfere with the final hair color.

Remember that the final hair color is always the result of combining the underlying pigment with the permanent shade that's applied.

Neutralize or Enhance

You have 2 options with the underlying pigment. You may either **Neutralize** or **Enhance** it.

- 1 **Neutralize:** If the underlying pigment is not desired, you must neutralize it by using the opposite tone on the color wheel.
- 2 **Enhance:** If the underlying pigment is desired, you may enhance it with an adjacent tone on the color wheel.

Example: The underlying pigment of Level 10 (*light yellow*) may be **Neutralized** by using a violet tone; or may be **Enhanced** by using a gold tone or copper tone.

Neutralizing Guide

The following page includes a neutralizing guide showing the **Underlying Pigment**, the **Neutralizing Pigment** and the **Neutralizing Tone**, for each final level.

UNDERLYING PIGMENT PIGMENT SOUS-JACENT		NEUTRALIZING GUIDE GUIDE DE NEUTRALISATION	
LEVEL NIVEAU	COLOR COULEUR	COLOR COULEUR	TONE REFLET
10	Light Yellow Jaune pâle	Violet Violet	.2 / V

PRE-PIGMENTATION	38
PRE-PIGMENTATION GUIDE	39

Levels and Tones

A shade is made up of a **LEVEL** plus one or more **TONES**.

Levels

The levels indicate the **shade's intensity** and are represented by numbers 1 to 10. HueSee uses the international system, where **1 represents the darkest level** (black) and **10 represents the lightest level** (very light blonde).

	10	Very Light Blonde
	9	Light Blonde
	8	Blonde
	7	Medium Blonde
	6	Dark Blonde
	5	Light Brown
	4	Medium Brown
	3	Dark Brown
	2	Very Dark Brown
	1	Black

Tones

The tones refer to the colors that are present in the shade. For ease of use, HueSee uses both **numbers** and **letters** to identify the tones.

The **Primary Tone** is the shade's main tone and determines if the shade is cool or warm. The **Secondary Tone** is subtle and indicates if the shade is cooler or warmer.

Shade Codes

Example 1

LEVEL	PRIMARY TONE	SECONDARY TONE
5	.6	4
5	R	c
Light Brown	Red Warm Shade	Copper Warmer

Example 2

LEVEL	PRIMARY TONE	SECONDARY TONE
10	.2	2
10	V	V
Very Light Blonde	Violet Cool Shade	Violet Cooler

When the primary tone and secondary tone are identical (**Example: .22 / VV**), the shade is considered intense.

Example 3

LEVEL	PRIMARY TONE	SECONDARY TONE
9	.0	7
9	N	m
Light Brown	Natural Neutral Shade	Matte Cooler

When there is a .0 or N in front of the secondary tone (**Example: .07 / Nm**), the tone's intensity is diluted.

Types of Color

TYPE OF COLOR	WHAT IT DOES	USE IT TO
○ Permanent Color	» LIGHTENS & COLORS	» Color hair permanently » Get 100% gray hair coverage
◐ Demi-Permanent Color	» COLORS gently WITHOUT ALTERING the natural pigments	» Add tone-on-tone reflects to natural hair » Color lightened hair » Revive the tones of faded color in the lengths and ends of the hair » Harmonize grays
⚡ Super Lightener	» LIGHTENS up to 4 levels WHILE NEUTRALIZING regular underlying pigments to create perfectly balanced light colors	» Color natural hair with the lightest shades possible without bleaching
⊗ Permanent Booster	» BOOSTS the intensity of your formulas	» Neutralize or enhance a tone » Add depth to a permanent color » Create vibrant and colorful permanent shades on pre-lightened hair
⊘ Demi-Permanent Booster	» BOOSTS the intensity of your formulas	» Neutralize or enhance a tone » Add depth to a demi-permanent color

TYPE OF COLOR	WHAT IT DOES	USE IT TO
⊕ MAGIC Lightening Booster	» AMPLIFIES & LIGHTENS up to 4 levels to create stunning contrasts	» Create vibrant and vivid permanent colors to natural or colored hair without bleaching

Instructions

○ Permanent Color		<p>For complete gray hair coverage, use any permanent shade with a 20-volume developer.</p> <p><i>Note that the higher the percentage of gray hair, the more tones of the selected shade will be apparent in the final color.</i></p>
◐ Demi-Permanent Color		<p>To vary the color deposit of a demi-permanent shade, vary the processing time between 20 and 30 minutes.</p> <p>For maximum color deposit and maximum color retention, respect the processing time of 30 minutes.</p>
⚡ Super Lightener		<p>For best results, use super lighteners on natural hair of level 5 and higher.</p> <p>Adjust the shade to achieve the desired final tone, if necessary.</p>
⊗ Permanent Booster		<p>To neutralize or enhance a tone, or to help add depth to a permanent color, add a permanent booster to your formula.</p> <p>Example: 25g of 6.66 / 6RR + 5g of 0.66 / RR and 45g of 10- to 40-volume developer</p> <p>If you're feeling more creative, use a permanent booster with a 10-volume developer on pre-lightened hair.</p> <p>Example: 30 g of 0.44 / CC and 45 g of 10-volume developer</p>
⊘ Demi-Permanent Booster		<p>To neutralize or enhance a tone, or to help add depth to a demi-permanent color, add a demi-permanent booster to your formula.</p> <p>Example: 25 g of 8.1 / 8A + 5 g of 0.11 / AA and 60 g of 3.5-volume developer</p>
⊕ MAGIC Lightening Booster		<p>For best results, use the Magic shades on natural hair of level 4 or higher or colored hair of level 5 or higher.</p> <p>When applying to the scalp, use a developer that is 20 volumes or less.</p> <p>Do not use heat.</p> <p><i>Note that Magic shades can be blended but cannot be mixed with other shades in the line.</i></p>

- » Do not use heat.
- » HueSee hair color was developed to be used on dry hair. For optimal and accurate results, always apply to dry hair.

Pre-Pigmentation

Pre-pigmentation is a necessary step when you want to **DARKEN THE HAIR** by **2 + LEVELS**. By providing additional pigments to the hair, you allow the final color to better resist fading.

Finding the Right Shade For Pre-Pigmentation

To apply pre-pigmentation correctly, it's important to choose a pre-pigment shade that meets these 3 conditions:

- ① The pre-pigment shade must be one level lighter than the final shade.
- ② The pre-pigment shade must only have warm tones.
- ③ The pre-pigment shade must have, at least, one tone that matches the underlying pigment of the final level.

There are often several possible pre-pigment shades. Select the one that best meets the final desired color that you want to achieve.

Example : Before coloring hair with the final shade 6.0 / 6N, you could use the pre-pigment shade 7.43 / 7Cg. This shade meets the 3 conditions. ① It is one level lighter than the final shade (level 7 versus level 6). ② All its tones are warm (copper and gold). ③ At least one of its tones (copper) matches the underlying pigment of level 6 (orange/red).

Pre-Pigmentation Instructions

Step 1: Begin by applying the selected pre-pigment shade according to the instructions below:

Step 2: Once the processing time is done, rinse, shampoo and dry the hair. Apply the final permanent shade according to the instructions below:

Pre-Pigmentation Guide

The following page includes a pre-pigmentation guide showing the **Pre-Pigment Shade Level** and the **Pre-Pigment Shade Tone(s)**, for each final level/underlying pigment.

We've listed the tones that are most often used, but other tones are possible.

BLEACHING POWDER

Key Ingredients

This blend of ingredients helps to **HYDRATE**, **SOFTEN**, **SMOOTHEN**, **REVITALIZE** and **PROTECT** the hair during the lightening process.

HYDRATES and **STRENGTHENS** hair for a perfect blonde.

Instructions

General Use

The bleaching powder can be mixed with the developer in a 1:1 to 1:2 ratio, without affecting the product performance. You can therefore vary the ratio (and consistency of the bleaching mixture) according to the technique used.

Highlights Without Foil

Opt for a thick consistency that holds well in place. Mix the bleaching powder with the developer in a 1:1 ratio. **Use paper between the sections.**

Highlights With Foil

Opt for your preferred consistency. Mix the bleaching powder with the developer in a 1:1 to 1:2 ratio. **Use the type of paper you prefer.** Suitable for all types of paper.

Applying to Scalp

Opt for a more fluid consistency that is easy to apply. Mix the bleaching powder with the developer in a 1:2 ratio. **Do not use a cap.**

- » Shake before use.
- » Do not use heat. Applying heat is not required to obtain professional results.
- » For maximum effectiveness, use a scale to measure the quantity of charcoal bleaching cream and developer. Mix until fully blended.

Charcoal Bleaching Cream

HueSee's Charcoal bleaching cream offers **EXCEPTIONAL LIGHTENING** with high-level **PROTECTION**. It keeps the hair structure intact, even during the most intense lightening processes.

- Quickly Lightens up to 9 Levels
- High-Protection Formula
- Contains Purifying and Hydrating Ingredients

CHARCOAL BLEACHING CREAM

Key Ingredients

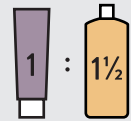

Its purifying properties help to **LIGHTEN** and **NEUTRALIZE** unwanted warm tones for quick and controlled lightening.

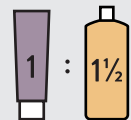

HYDRATES the hair and scalp, **STRENGTHENS** the hair and boosts its elasticity, prevents breakage and split ends for magnificent, healthy blondes.

Instructions

General Use

 **10_v - 40_v**  **25 - 45 MIN** The charcoal bleaching cream must always be mixed with the developer in a 1:1½ ratio.

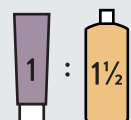

Highlights Without Foil

 **10_v - 40_v**  **25 - 45 MIN** Use paper between the sections.

Highlights With Foil

 **10_v - 40_v**  **25 - 45 MIN** Use the type of paper your prefer. Suitable for all types of paper.

Applying to Scalp

 **10_v - 20_v**  **25 - 45 MIN** Do not use a cap.

» Do not use heat. Applying heat is not required to obtain professional results.
» For maximum effectiveness, use a scale to measure the quantity of charcoal bleaching cream and developer. Mix until fully blended.
